

# Kingcausie Fishings, Maryculter

# Kingcausie Fishings- Bridge & Hut Pools

Fishes from 2'6" to 9" (Park). Normally fished as a single pool, Bridge and Hut are perfect fly water- good flow, decent depth and rocky bottom. Fast water at bridge holds up runners whilst deep, steady water above Hut give good cover for residents and resting fish. Fish run & lie close along entire North bank in higher water but move over to middle of pool and South bank by 1'6". In 'best' heights (1'9" to 1') North bank gives easier fishing, South bank better fish coverage but difficult wading.

# Kingcausie Fishings- Flats & Corner Pools

Flats fishes 2'6" down to 1'. Historically Flats was a good holding pool, but has shingled up badly due to river widening from cattle erosion of the North bank. In high water (down to 2') runners rest up in 3-4' of water close to the North bank and can be covered from a near-bank wade. Below 1'9", fish run and rest in streamy, shaded water close to South bank. A fallen tree in water on South bank has good lies around it. Below the tree, the holding/taking lies are 10-15 yards out from South bank, all the way down to submerged rocks out from last trees before Corner. South bank is difficult fishing but gives better fish coverage than North bank, especially in higher water.

LW Taking zone

Corner fishes 1'9"-1'. Shallow (3-4ft), fast and weedy. Pausing runners only.

# Kingcausie Fishings- Woods Pool

Fishes 2'6" -> 9" (Park). North Bank only. Probably the best holding pool and fly water on Kingcausie—good flow towards South bank at most heights, decent depth in lower half and well shaded throughout in the morning. Excellent wading at all heights. Fishes best from 1'6" down, wading the mid-line and casting hard onto far bank. The fast, shallow neck holds up runners whilst the deep, shaded and steady mid/lower section hold all classes of fish. The very tail, hard against South bank, can be good for runners, which come up the 'back of the island' as well as the main stream.

# Kingcausie Fishings- Car Park Pool

Fishes 2'6" to 1'3" (Park). Historically one of Kingcausie's top pools in most water heights but has been subject to major gravel shifts. At 1'9" and below now only a short 'tail' hard on South bank above the fast stream and the stream itself. The Car Park Pool is above some very hard water out of the Island and so tends to be a runner resting place- lacking depth, it is not holding water. The best taking water (runners and resters) is a short stretch of steady water deep in tail and hard on South bank. The stream below looks very 'fishy' at times but has not produced much to date, although has deepened in 2013. The entire pool is very shallow (3-4ft) so needs a light, quiet approach and cloudy conditions.

# Kingcausie Fishings- Island Corner and Island Stream

# Kingcausie Fishings- Powberry Pool

Fishes with fly from 2' down to 6"- best v. low water pool in beat. Start above angled tree, fishing hard onto South bank. After tip of island, cover right across into rushing water from behind island. Holding/taking water is all on opposite side, normally on edge of faster water- expect powerful takes in strong flow! The back-eddy and slow flow on North side never hold fish at fly height. Subject to flow, fish right down to end of field opposite- the last section beneath the trees and the final clear section ("The Bath") are resting places for runners.

# Kingcausie Fishings- Blairs Pool

Fishes from 1'6" down to 9" (Park). Bottom end holds big head of resident fish from September onward- before then looking only for 'runners'. Wade to as near mid-line of pool as possible, starting opposite large boulders in S bank. Fish 'lightly' due to shallow and slow water. Taking area in low water is hard onto South Bank. Best taking lies are from small croy opposite large bush & down to beat limit. The pool deepens significantly after the bush, so edge back towards the bank here. Excellent evening sea trout pool May to July after any rise.
